PUSH OF MAIN

What happened

The pricing page got its second iteration and its public debut. Iteration 1 had rebuilt Mimi's two flyers as HTML; the call this session was to show her actual artwork instead. The page now embeds both flyers as images inside the site's moody frame, cropped only to remove the printed `www.mimischocolatebites.com` strips, which are replaced by real links to Instagram and the order form. After side-by-side desktop layout and equal-width phone stacking were verified in both viewports, the branch was merged to main and deployed to `mimischocolatebites.com`, with a new See pricing button on the landing page so visitors can actually find it. Every change was screenshot-verified locally before deploying, and the live domain was curl-checked after.

Shipped, by area

/pricing (iteration 2)

- Both flyers embedded as images, replacing 325 lines of HTML re-layout with 67
- Website-URL strips cropped off each flyer (sips, top-anchored); originals in `flyers/` untouched
- Themed header, jump pills, and CTA row: Order your treats → /contact, DM us instead → Instagram
- **Fixed:** By the Dozen flyer stretching soft at full column width; desktop is now a side-by-side grid that keeps the 512px source at native size
- Phones stack both flyers edge-to-edge at identical widths
- Full pricing written into each image's alt text for screen readers and search

Landing page

- See pricing button added between Place an inquiry and Follow, price-tag icon, outline style
- One-screen no-scroll layout verified intact on phone and desktop

Repo & deploys

- pricing-iteration-2 merged to main with a merge commit; main pushed to GitHub for the first time (remote previously held only feature branches)
- **Fixed:** branch preview that never built; the Pages project is direct-upload, not Git-connected, so previews and production both ship via `wrangler pages deploy`
- Two production deploys, both verified live on the custom domain

Deliberately not built (on the roadmap)

ITEM	PRIORITY
Add /pricing to <code>sitemap.xml</code>	High
Hi-res By the Dozen flyer from Mimi (current source is 512px; sharp at today's sizes, no headroom)	Medium
Hi-res transparent logo export from Mimi (long-standing)	Medium
SMS nudge for new inquiries (Gmail filter → carrier email-to-text)	Low

Paper trail

- `src/pages/pricing.astro` – header comment documents the crop lines and the alt-text rule for future price changes
- `flyers/` – Mimi's original flyer PNGs, unmodified
- `public/img/flyers/` – the cropped web versions the page serves
- Branches `pricing-page` (iteration 1) and `pricing-iteration-2` both preserved on GitHub
