What happened

Mimi supplied a full order-form field spec, a revised six-tile By the Dozen flyer, and a printed fall production sheet. The contact form was rebuilt from a 4-field note into a structured order form, iterated live across nine deploys as the treat-group layout settled (chocolate preference moved into the treat group, back out, then back in once premade flavors gave the grouping its final shape). Every deploy was built locally, screenshot-checked in a real browser, shipped to Cloudflare Pages, and curl-verified against the production domain. A mock order was submitted end to end to confirm what lands in Mimi's inbox, and the Colorado cottage-food label problem got a researched fix with a visual 2" sticker mock-up.

Order form (/contact)

- Rebuilt to Mimi's 12-field spec; only name and email required
- Repeatable treat groups: type dropdown, quantity, premade flavor, "or build your own" chocolate + toppings; "+ Add another treat" clones the whole group (max 6, x to remove)
- Premade flavor menu from her fall sheet: 10 flavors + Gluten Free + Build my own; Biscoff Cookie Butter swapped in for Caramel Apple
- Colorado cottage-food disclosure, her wording verbatim, in fine print under Submit
- Empty optional fields stripped before send so order emails stay clean
- Treat fields renumbered per group ("Treat 1", "Treat 1 quantity", ...) in the email
- Card widened to `max-w-2xl`; placeholders no longer clip

Pricing page (/pricing)

- New six-tile By the Dozen flyer live: adds Strawberries (\$18/\$32) and Marshmallows (\$16/\$28)
- Same crop treatment as before: www strip removed, Denver CO ribbon kept (512×620 of 640); original archived in `flyers/`
- Alt-text pricing rewritten for all six tiles (screen readers + SEO)
- Side-by-side flyers now render the same height: grid columns proportional to each flyer's aspect ratio

Print (mimis-print)

- 2" sticker system preview: pretty front sticker + fine-print back label (round and 2×3" options) carrying every required label element
- Researched CO Cottage Foods Act labeling: "legible print" only, no minimum font size; point-

- **Fixed:** browser autofill prepending "+1" to phone numbers (`autocomplete="tel-national"`) of-sale sign uses a shorter statement than the package label
- Verification**
- Mock order submitted through the live form; order-email preview mocked for Ciera
 - All nine deploys verified on `mimis-chocolate-bites.com` after cache settle

Deliberately not built

ITEM	WHY IT WAITED	PRIORITY
Full premade-flavor list swap	Mimi is sending the complete list; current menu is her fall sheet plus verbal additions	HIGH
Print-ready sticker PDFs	Blocked on Mimi's street address and real per-flavor ingredient lists; then wires into <code>render.mjs</code>	HIGH
Treat photos on the site	Placeholder tiles remain; needs real product photography	MED
SMS order nudge	Gmail filter to carrier email-to-text; plan exists, not set up	MED
Reviews page	Parked on branch until Mimi has a Google review link	LOW

One process miss worth recording: a live test order reached Mimi's inbox seconds before Ciera asked to hold it. It was loudly labeled as a test. Future previews use the local email mock instead of the live form.

Paper trail

- `mimis-chocolate-bites/src/components/InquiryForm.astro` – the whole form v2
- `mimis-chocolate-bites/flyers/by-the-dozen-2026-09.png` – untouched new flyer source
- `mimis-print/sticker-preview.html` – 2" sticker system, actual size + zoom
- `mimis-chocolate-bites/docs/reports/2026-09-16-build-report.html` – this report's source
