What happened

Two bodies of work for Mimi's home chocolate business. First, a print collateral kit in a new `mimis-print` workspace: a two-sided business card with a QR code to the website, a 5×7 counter sign explaining base-price-plus-quote pricing, and a US-Letter invoice that is a genuinely fillable PDF form. Second, a `/reviews` page for the website, built on its own branch as an idea for later – nothing touched the live site. Every piece reuses the brand tokens straight from the site source (cocoa, cream, blush, gold; Parisienne, Fraunces, Nunito) so print and web match exactly.

Shipped, by area

Business card (3.5×2 in + bleed, front/back)

- Cream front: logo, script wordmark, "Made with Love"
- Cocoa back: QR code to `mimis-chocolatebites.com` in a cream tile, `@mimis-chocolatebites` handle, site URL
- QR generated as vector SVG in brand cocoa, so it stays crisp at any print size

Pricing sign (5×7 in, fits a standard frame)

- Gold double frame, script "A Note on Pricing" headline
- Copy rewritten in original wording: listed prices are starting points; final quote follows theme, colors, design details, personal touches, and add-ons
- IG handle + site URL footer

Fillable invoice (US Letter)

Website: /reviews page (branch only)

- "Kind words from sweet people" in the Rich & Moody style: raining cake pops, cream review cards, five blush hearts instead of stars
- Card grid collapses to one column on phones; same Back-link treatment as `/contact`
- "Enjoyed your bites?" CTA: gold **Leave a review** button plus a **DM us instead** Instagram button
- All six reviews are sample copy, labeled in the code; `REVIEW_URL` points at `/contact` until Mimi has a Google review link
- Not linked from the landing yet – a design call for when it ships

Pipeline & housekeeping

- New `mimis-print` repo: HTML → Playwright PDF render, Ghostscript previews, pdf-lib form pass, README

- 46 real AcroForm fields: invoice no./date, bill-to, occasion and theme, 8 line-item rows, notes, payment, subtotal through total due
- Works in macOS Preview, Acrobat, and phone PDF viewers; prints clean for handwriting too
- Field coordinates in `make-invoice.mjs` mirror the inch-positioned zones in `invoice.html`, so design and form stay in lockstep
- Deliverable PDFs committed alongside source so nothing depends on a rebuild
- Session memory updated: print project, reviews branch, and the direct-upload deploy gotcha below

Verification

The invoice was proof-tested by programmatically filling all field types and re-rendering – every entry landed inside its styled zone (`build/_filled-test.pdf`, fake data). The business card was confirmed as a true two-page PDF with both sides rendered. The reviews page passed an `astro build` and was screenshotted at desktop (1280px) and phone (390px) widths from the built output. No automated review swept this session; it is design work, not logic.

Deliberately not built (on the roadmap)

ITEM	PRIORITY
Swap sample reviews for real ones + set up a Google Business profile so "Leave a review" has a real target	High – before /reviews ships
Price-list card in the same style, once Mimi lands her package prices	Medium
Phone number on the card back (site is inquiry-form-only today; needs Mimi's call)	Medium
Link /reviews from the landing without crowding the one-screen hero	Medium – ships with the page
CMYK export of card + sign if the print shop requires it (Ghostscript step exists in rhr-banners)	Low – shop-dependent
CGC portal invoicing add-on (branded invoices, marketing collateral, accounting rollups) with Mimi's as pilot client	Later iteration – after core portal ships

Paper trail

- `~/DEVELOPMENT/mimis-print/` – card, sign, invoice source + `build/` PDFs and previews
- `~/DEVELOPMENT/mimis-print/README.md` – rebuild commands and pipeline notes
- `src/pages/reviews.astro` on branch `reviews-page` – placeholder markers in the frontmatter comment
- Deploy note: Cloudflare Pages is direct-upload, so pushed branches deploy nothing; preview via `wrangler pages deploy dist --branch=reviews-page`
